Java

Python

Operating Systems:

Windows 3.1 – 10

OS 7.5, OS X

Linux (primarily Ubuntu)

Software:

Microsoft MVC, Razor, Entity

Framework, LINQ

Spring MVC, Thymeleaf,

Hibernate, JPA

Projects

Ticket System (<http://github.com/jahouk/ticket-system>)

Ticket tracking system for my freelance tech support.

- Built totally in Spring trying to keep all the database calls limited to JPA to make the project adaptable on deployment.
- App is currently maybe 50% completed to be used in beta/production.

Kitchen Manager Prototype (<http://github.com/jahouk/prototype>)

This application is the proof of concept to figure out how to interchange ingredients between volume measurement and weight measure for pricing food cost of a food operation.

- This application was written in C# MVC and while it works for proving the concept does not have some elements fleshed out.
- The next step on this project is rewriting but with users, taking what was learned on the Ticket System project.

Recent and Related Work Experience

11/2014 – 12/2014 **Peel Pizza**

O'Fallon, IL 62269

Prep Cook

6/2014 – 7/2014 **222 Artisan Bakery**
